

Our Access Control Management System is now becoming a PRO

AxTraxPro New Features & Capabilities

Web Management Interface

New web client allows operators, managers, and administrators to control their AxTraxPro platform locally or remotely, including managing doors, users, and lockdown groups, and viewing network information, reports, and events.

End to End Security

Communication is now secured from the credential all the way to the server using advanced encryption algorithms.

OSDP V2 Secure Channel

Advanced session-based security between the AC-825IP controller and peripheral devices (i.e., OSDP readers and the R/S/D/P-805 expansion boards).

Lockdown

Monitoring and control tool used for stopping access rights for any group of access point during an emergency event. Ensures secure facility access in a single operation while keeping intruders out, or from moving around the facility.

Enhanced Security

Using AES 256-bit encryption communication between the AxTraxPro server and the AC-825IP, compared to previous AES 128-bit encryption.

Access Level

New access control logic allows to assign authorization levels to readers and users for a more flexible access permission and restriction management.

The AC-825IP controller now supports up to 6 OSDP Readers

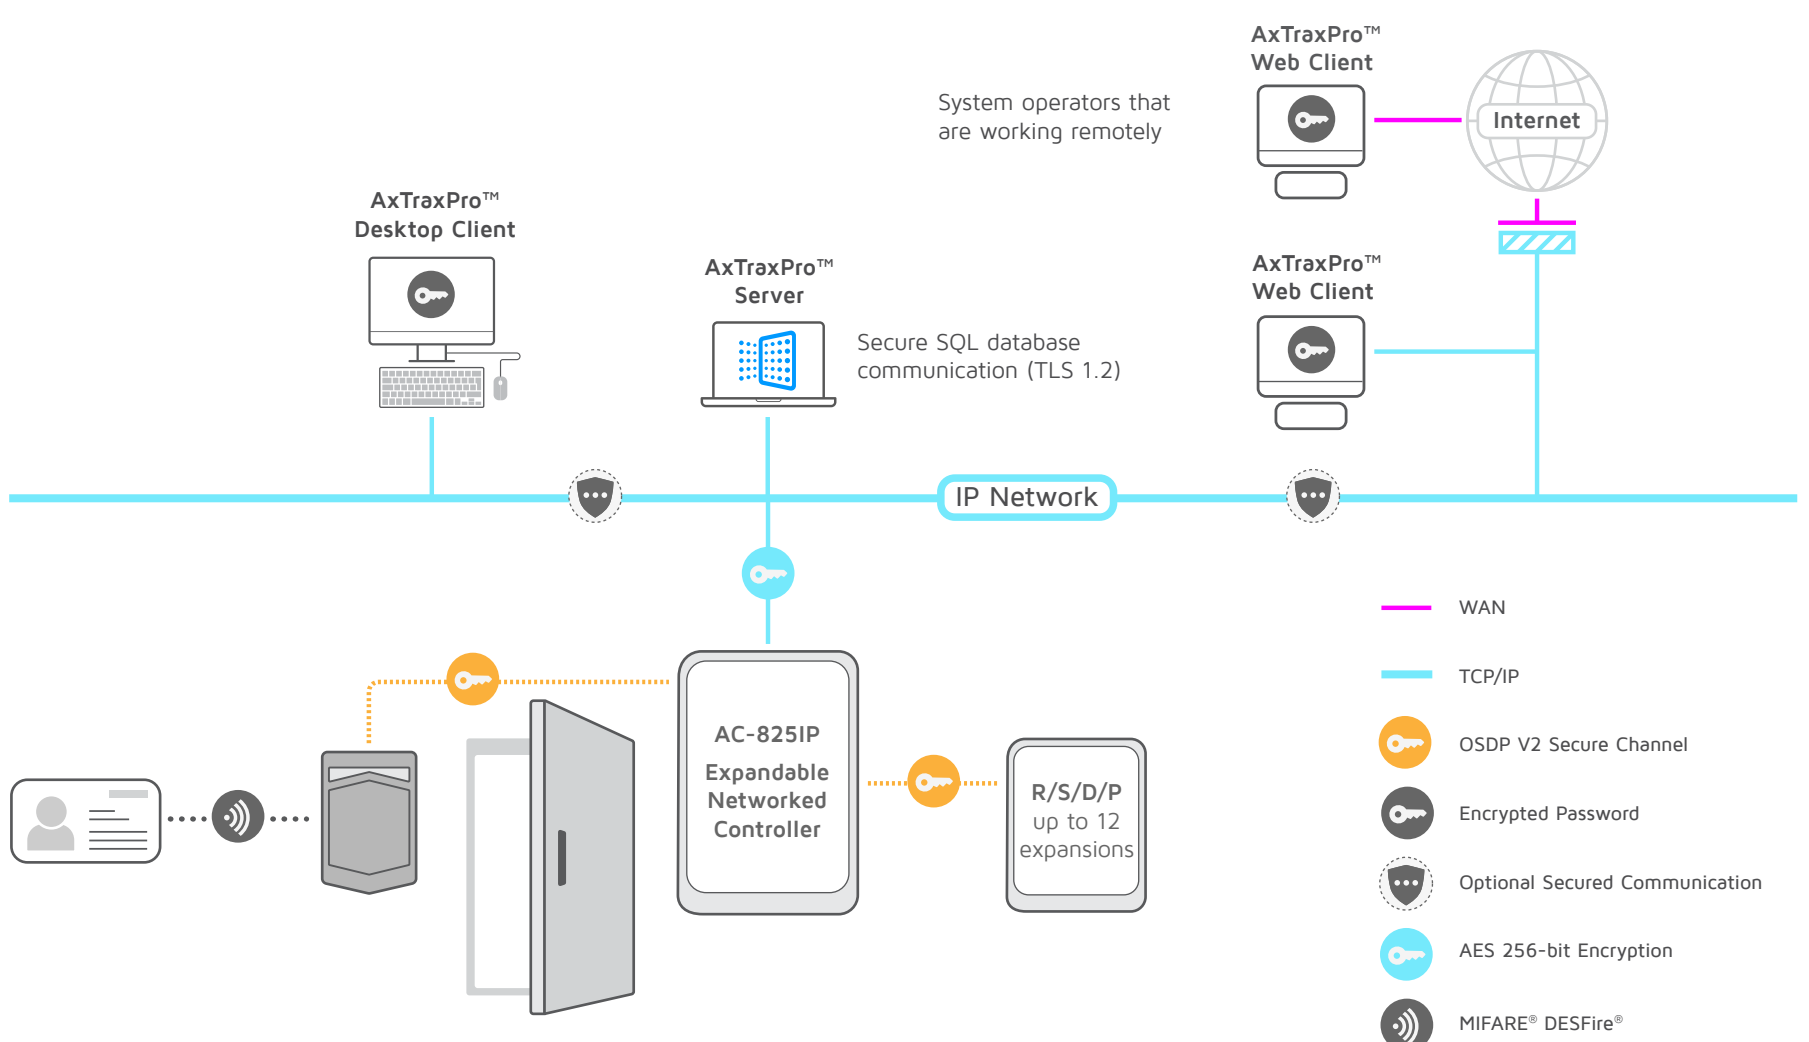

Windows OS 64-bit based software for the AxTraxPro server

HTTP Based API for a 3rd party integration with the AxTraxPro

Secured all the way

Upgrade your existing Access Control system today!
